The following is an examiner's statement of reasons for allowance: The claims are allowable over Munday et al (US 3,781,409) for the reasons presented by applicants in the Remarks of November 30, 2005. In addition, the Wang Declaration filed under 37 CFR 1.132 on November 30, 2005 provides evidence that the hydrogen peroxide solution of Munday et al is acidic even before the pH is adjusted with acid, according to the disclosure at col. 4, lines 14-23 of Munday et al. Accordingly the solution disclosed at col. 4, lines 14-23 of Munday et al would not be basic at the point where the nitrilo tri(methylenephosphonic acid) is added.

The claims are allowable over Feasey et al (US 5,130,053) for the reasons presented by applicants in the Remarks of April 6, 2006. In particular,, the data in the present specification shows that hydrogen peroxide stability at alkaline pHs is only provided by the three component stabilizer system recited in applicants' claims. Although Feasey et al teach in the paragraph bridging columns 4 and 5 that the phosphonic acid stabilizer may be employed in combination with other stabilizers such as stannates and salicyclic acid, one of ordinary skill in the art would not necessarily employ such other stabilizers in combination with the phosphonic acid, since Feasey et al teach at col. 4, lines 64 and 65 that the phosphonic acid may be employed as the sole stabilizer. Moreover, applicants' claims require that the composition comprises less than 1 ppm of pyrophosphate. The aqueous solution of hydrogen peroxide disclosed by Fealey et al would not necessarily contain less than 1 ppm pyrophosphate, since up to about 10 ppm could be present because of pyrophosphate added by the manufacturer of the hydrogen peroxide. (See page 6, lines 19-23 of applicants' specification.)
